## Electronically Capture Paper EOB Data

Automate Payment Posting and  
Secondary Claims Processing

POWEReob improves workflow processes by converting paper EOBs into an electronic ANSI 835 (ERA) file. The resulting file can then be interfaced with your existing billing system to automatically apply payments to patient accounts. Also, an ANSI 837 secondary claim file, with coordination of benefits (COB) information embedded, can be transmitted to the payer.

### Eliminate Drudgery and Improve Productivity

- Securely transmit the scanned file to the *POWEReob* processing center.
- The scanned images are converted into a ANSI 835 file format, and forwarded to the practice usually the next business day.

### Immediate Benefits that Increase the Bottom Line

- Saves - money and time by faster payment posting.
- Improves Cash - fewer delays and fewer errors.
- Frees Labor - for other important tasks.
- Lowers Operating Costs - fewer computer workstations and less office space.
